

Stages Combination Guide

The Xeryon precision stages can be combined into different configurations such as XY, XYZ, XTheta or XYTheta. The matching mounting hole patterns of our different stages makes it very easy to build any configuration without the use of custom adapter plates.

Almost all of our linear and rotary stages can be mounted without any custom adapter plates needed. Often combinations only need 4 bolts and a hex key. If not, Xeryon provides you with our standard L-bracket to set up fast and easy.

This overview shows the possible combinations.

Vertical Mounting

For vertical mounting a Xeryon bracket is always needed.
